SUBJECT INDEX

Acetylenes
doped poly(substituted), conductivity measurements on, 337
Additives
influence of, on electrochemical oxidation of polyacetylene, 319
Alkyl
benzyl and methoxy derivatives of polythiophene, electronic structure of, 149
Aluminium
thin layers of poly(fluoroaluminium–phthalocyanine), 255
Ammonia
effect of, on physical properties of polypyrrole, 203
Arsenic
optical properties of AsF_5-doped *trans*-polyacetylene, 267

Band filling(s)
Coulomb correlations in one-dimensional conductors with incommensurate, and semiconductor–metal transition in polyacetylene, 271
variable, and insulator-to-metal transition in structure-enforced molecular metal, 261
Bechgaard salts
spin dynamics of field-induced spin density waves in, 279
Bridging materials
between hydrogenated amorphous Si and polyacetylene; preparation, structural and electronic properties, 325

Capacitive effect
overdoping and, in polypyrrole, 129
Charge transport
in conducting polymers, effects of magnetic order on, 109
Chemical vapour deposition
polypyrrole prepared by, using hydrogen peroxide and hydrochloric acid, 169
Conducting polymers
charge transport in, effects of magnetic order on, 109
electronic structure of,
from heteroaromatic bicyclic compounds, 189
investigations of oriented samples by electron energy-loss spectroscopy, 87
S-containing, 223
properties of, some new electrochemical results on, 209
soluble; poly(3-alkylthienylenes), 41
UHV-compatible processing of; polythiophene, 57
what does the future hold? , 79
Conduction process
water effects in polyaniline; new, 135
Conductive polymers
some potential applications for, 13
Conductive polypyrroles
Raman spectroscopy of, 249
Conductivity
polyaniline; processability from aqueous solutions and effect of water vapor on, 21
Conductivity measurements
on doped poly(substituted) acetylenes, 337
Conjugation length
of polyacetylene chains, influence of, on d.c. conductivity, 285
in polymers, physical meaning of, 95
Copper
highly conducting iodine-doped poly(copper-yne) from phenylacetylene, 353
Coulomb correlations
in one-dimensional conductors with incommensurate band fillings and semiconductor–metal transition in polyacetylene, 271
d.c. conductivity
influence of conjugation length of polyacetylene chains on, 285
d.c. electric fields
Fourier transform infrared study of lightly doped polythiophene under, 215
Density waves
field-induced spin, in Bechgaard salts, spin dynamics of, 279

© Elsevier Sequoia/Printed in The Netherlands

Dimerization energy
of *trans*-polyacetylene, first principles investigation on validity of Peierls mechanism for, 301
Dimethylaniline polymers
electronic structure and properties of, 181
Dopant environment
in electret-forming polymers, role of, 361

Electret-forming polymers
role of dopant environment in, 361
Electrical conductivities
electronic states and, of polyvinylenesulphides, 235
Electrical properties
of polymers prepared from iodo-(4-nitrophenyl)acetylene, 343
of quasi-one-dimensional semiconductor halogen-bridged platinum complexes, 373
Electrochemical n-doping
of polyacetylene, kinetics of investigated by impedance and galvanostatic pulse measurements, 293
Electrochemical oxidation
of polyacetylene, influence of additives on, 319
and reduction, optical spectroscopy and resonance Raman scattering of polyaniline during, 157
Electrochemical results
on properties of conducting polymers, some new, 209
Electron energy-loss spectroscopy
investigations of oriented samples by; electronic structure of conducting polymers, 87
Electronic materials
polymers as, frontiers in development of, 5
Electronic processes
in extended conjugated polymer chains, 71
Electronic properties
bridging materials between hydrogenated amorphous Si and polyacetylene; preparation, structural and, 325
Electronic states
and electrical conductivities of polyvinylenesulphides, 235
Electronic structure(s)
of alkyl, benzyl and methoxy derivatives of polythiophene, 149
of conducting polymers
from heteroaromatic bicyclic compounds, 189
investigations of oriented samples by electron energy-loss spectroscopy, 87
S-containing, 223
of dimethylaniline polymers, and properties, 181
of emeraldine and related molecules, influence of composition and conformation on, 163
of polythiophene, 197
Electroreduction
poly(paraphenylene) thin film prepared by, optical studies on, 241
Emeraldine
effect of protonation in; insulator-to-metal transition in polyaniline, 63
electronic structure of, and related molecules, influence of composition and conformation on, 163

Fluorine
optical properties of AsF_5-doped *trans*-polyacetylene, 267
Fourier transform infrared study
of lightly doped polythiophene under d.c. electric fields, 215

Gap states
photoinduced absorption of, in iodine-doped polyacetylene, 123

Halogen
electrical properties of quasi-one-dimensional semiconductor halogen-bridged platinum complexes, 373
spectroscopic study on halogen-mixed crystals of halogen-bridged Pt complexes, 103
Heteroaromatic bicyclic compounds
electronic structure of conducting polymers from, 189
Hopping conduction
in polyaniline, pressure, temperature and field dependence of, 143

Insulator-to-metal transition
in polyaniline; effect of protonation in emeraldine, 63
in structure-enforced molecular metal, variable band filling and, 261
Iodine
highly conducting iodine-doped poly(copper-yne) from phenylacetylene, 353

Iodo-(4-nitrophenyl)acetylene
polymers prepared from, electrical properties of, 343

Kinetics
of electrochemical n-doping of polyacetylene investigated by impedance and galvanostatic pulse measurements, 293

Magnetic order
effects of, on charge transport in conducting polymers, 109
Molecular chains
quantum wells in conjugated, and spacer molecules in 'molecular wires'; model calculations of polymer heterostructures, 305
Molecular electronics
polyene chains in, 51
Molecular metal
variable band filling and insulator-to-metal transition in structure-enforced, 261

Oligophenyls
vibrational studies of poly(*para*phenylene); comparison with, 229
One-dimensional conductors
Coulomb correlations in, with incommensurate band fillings and semiconductor–metal transition in, 271
Optical properties
of AsF_5-doped *trans*-polyacetylene, 267
Optical spectroscopy
and resonance Raman scattering of polyaniline during electrochemical oxidation and reduction, 157
Optical studies
on poly(*para*phenylene) thin film prepared by electroreduction, 241
Orientational order
in particles of solubilized polyacetylene, 313
Overdoping
and capacitive effect in polypyrrole, 129

Peierls mechanism
first principles investigation on validity of, for dimerization energy of *trans*-polyacetylene, 301
Phenylacetylene
highly conducting iodine-doped poly(copper-yne) from, 353
Photoinduced absorption
of gap states in iodine-doped polyacetylene, 123

Platinum complexes
electrical properties of quasi-one-dimensional semiconductor halogen-bridged, 373
spectroscopic study on halogen-mixed crystals of halogen-bridged, 103
Polaron–bipolaron systems
spectroelectrochemical studies of redox mechanisms in polyaniline films; evidence of, 117
Polyacetylene
AsF_5-doped *trans*-, optical properties of, 267
bridging materials between hydrogenated amorphous Si and; preparation, structural and electronic properties, 325
Coulomb correlations in one-dimensional conductors with incommensurate band fillings and semiconductor–metal transition in, 271
electrochemical oxidation of, influence of additives on, 319
kinetics of electrochemical n-doping of, investigated by impedance and galvanostatic pulse measurements, 293
orientational order in particles of solubilized, 313
photoinduced absorption of gap states in iodine-doped, 123
solitons in, how many kinds of, exist? , 331
on validity of Peierls mechanism for dimerization energy of *trans*-, first principles investigation, 301
Polyacetylene chains
conjugation length of, influence of, on d.c. conductivity, 285
Poly(3-alkylthienylenes)
soluble conducting polymers, 41
Polyaniline
hopping conduction in, pressure, temperature and field dependence of, 143
insulator-to-metal transition in; effect of protonation in emeraldine, 63
model studies, 31
optical spectroscopy and resonance Raman scattering of, during electrochemical oxidation and reduction, 157
processability from aqueous solutions and effect of water vapor on conductivity, 21
spectroscopic studies of, 175

water effects in; new conduction process, 135
Polyaniline films
spectroelectrochemical studies of redox mechanisms in; evidence of two polaron–bipolaron systems, 117
Poly(copper-yne)
from phenylacetylene, highly conducting iodine-doped, 353
Polyene chains
in molecular electronics, 51
Poly(fluoroaluminium–phthalocyanine)
thin layers of, 255
Polymer(s)
conducting
charge transport in, effects of magnetic order on, 109
electronic structure of
from heteroaromatic bicyclic compounds, 189
investigations of oriented samples by electron energy-loss spectroscopy, 87
S-containing, 223
properties of, some new electrochemical results on, 209
soluble, poly(3-alkylthienylenes), 41
UHV-compatible processing of; polythiophene, 57
what does the future hold?, 79
conductive, some potential applications for, 13
conjugation length in, physical meaning of, 95
dimethylaniline, electronic structure and properties of, 181
electret-forming, role of dopant environment in, 361
as electronic materials, frontiers in development of, 5
prepared from iodo-(4-nitrophenyl)-acetylene, electrical properties of, 343
Polymer chains
electronic processes in extended conjugated, 71
Polymer heterostructures
model calculations of; quantum wells in conjugated molecular chains and spacer molecules in 'molecular wires', 305
Poly(*para*phenylene)
vibrational studies of; comparison with with oligophenyls, 229
Poly(*para*phenylene) thin film
prepared by electroreduction, optical studies on, 241
Polypyrrole(s)
conductive, Raman spectroscopy of, 249
effect of ammonia on physical properties of, 203
overdoping and capacitive effect in, 129
prepared by chemical vapour deposition using hydrogen peroxide and hydrochloric acid, 169
Poly(substituted) acetylenes
conductivity measurements on doped, 337
Polythiophene
electronic structure of, 197
alkyl, benzyl and methoxy derivatives of, 149
lightly doped, Fourier transform infrared study of, under d.c. electric fields, 215
UHV-compatible processing of conducting polymers, 57
Polyvinylenesulphides
electronic states and electrical conductivities of, 235
Pressure
temperature and field dependence of hopping conduction in polyaniline, 143
Protonation
effect of, in emeraldine; insulator-to-metal transition in polyaniline, 63
Pulse measurements
impedance and galvanostatic, kinetics of electrochemical n-doping of polyacetylene investigated by, 293

Quantum wells
in conjugated molecular chains and spacer molecules in 'molecular wires'; model calculations of polymer heterostructures, 305

Raman scattering
of polyaniline during electro chemical oxidation and reduction, optical spectroscopy and resonance, 157
Raman spectroscopy
of conductive polypyrroles, 249
Redox mechanisms
in polyaniline films, spectroelectrochemical studies of; evidence of two polaron–bipolaron systems, 117

Semiconductor–metal transition
in polyacetylene, Coulomb correlations in one-dimensional conductors with incommensurate band fillings and, 271
Silcion
bridging materials between hydrogenated amorphous, and polyacetylene; preparation, structural and electronic properties, 325
Solitons
in polyacetylene, how many kinds, exist?, 331
Spacer molecules
in 'molecular wires', quantum wells in conjugated molecular chains and; model calculations of polymer heterostructures, 305
Spectroelectrochemical studies
of redox mechanisms in polyaniline films; evidence of two polaron–bipolaron systems, 117
Spectroscopic studies
on halogen-mixed crystals of halogen-bridged Pt complexes, 103
of polyaniline, 175
Spin dynamics
of field-induced spin density waves in Bechgaard salts, 279
Sulphur
electronic structure of S-containing conducting polymers, 223

UHV-compatible processing
of conducting polymers; polythiophene, 57

Vibrational studies
of poly(*para*phenylene); comparison with oligophenyls, 229

Water effects
in polyaniline; new conduction process, 135
Water vapor
effect of, on conductivity; polyaniline, processability from aqueous solutions and, 21
